

BIOTECHNOLOGY SEARCHES

Biotechnology is like a whole new modern language. If a searcher isn't fluent in that language – or doesn't understand the science behind the concepts – the search results won't meet your expectations. Rather than a searcher migrating to biotechnology from another discipline, a true biotech searcher's background needs to be embedded within the world of molecular and cellular biology, immunology, cancer biology, structural biology, biochemistry, molecular pathology, array technology, plant biology, bio-informatics and comparative genomics. This TPR knows.

Each member of TPR's world-class biotech team has a BS or PhD in a core biotechnology subject area. They have actively conducted research at leading institutions, and are patented inventors or published authors in multiple research journals. In addition, they have worked within leading corporations as professional searchers in the biotech area, utilizing specialist databases and library resources.

When you work with TPR, you can be sure that our biotech team has all the right capabilities in place to tackle the unique challenges of biotechnology searching, including:

- A deep knowledge base that fully covers the subject area
- The ability to handle complex or extremely large patent documents
- The capacity to understand sequence based searching algorithms
- Dealing with multiple sequence variants
- A true appreciation of the effect of repeats in sequence based analysis
- An understanding of sequence searching at the DNA, RNA and protein sequence levels that enables more robust searches and better data interpretation
- International reach to uncover elusive prior art via our exclusive Validity Ultimate™ Service

The ability of our biotech searchers to review patents, understand the significance of patent claims, and hone in on pertinent scientific papers, provides the analysis portion of the work that is a key part to providing meaningful, on-target results. Their collaborative approach draws out your main concerns and ensures that your search objectives are met.

Simply translated, that means search results you can feel confident about.

Chemical / Polymer
Pharmaceutical

▶ The TPR Difference

It was true during our first search in 1995, and it's true today. We're here to make a real impact for our clients – one that empowers them to make smarter, more insightful business decisions.

To do that, we leverage the most experienced searchers, the deepest subject matter expertise, and the broadest knowledge of U.S. and international patent and non-patent literature resources.

Today – and thousands of successful search projects later – we're known for our worldwide reach and exceptional search capabilities. It's a direct result of our diversity and depth of service, combined with our passion to go that extra mile to find business critical information and prior art.
