## COMPUTER SCIENCE SEARCHES

Swift innovation. It's a defining trait of the computer science industry. From transactional computing to logics, database management, e-commerce, and beyond, the patented realm of computer science is vast and ever changing.

For companies grounded in this field, staying abreast of the changing technological and legal landscape is a matter of survival.

At TPR, we work to provide our clients with in-depth, meaningful searches to help them make well-considered business decisions. But the task isn't easy. Computer science searches are rife with unique challenges. Searchers must be aware of the roles different operating systems, software, and their associated features play in the patent landscape.

Computer science is an area where non-patent literature searching often produces highly impactful results, even over patent searching. In such cases, a searcher with an expert knowledge of computer systems or software and a strong grasp on the defined novelty will have a keen sense of where to look within non-patent literature sources.

Because this search field is so demanding, we only hire the best. Members of our computer science team hold a technical degree within the field, as well as several years of professional searching experience in computer science, software development, patent and information searching.

Patent & Non-Patent Literature  
North America • Europe • Asia

### ▶ The TPR Difference

It was true during our first search in 1995, and it's true today. We're here to make a real impact for our clients – one that empowers them to make smarter, more insightful business decisions.

To do that, we leverage the most experienced searchers, the deepest subject matter expertise, and the broadest knowledge of U.S. and international patent and non-patent literature resources.

Today – and thousands of successful search projects later – we're known for our worldwide reach and exceptional search capabilities. It's a direct result of our diversity and depth of service, combined with our passion to go that extra mile to find business critical information and prior art.
